

high-speed grinders

Designed with a collection of innovative features, the Doppstadt AK Series of horizontal, high-speed grinders are engineered to produce hundreds of yards of finished material every day.

These machines handle all types of organic feedstocks, wood waste, shingles, dry wall, and even C&D. Why not build your business on the back of a Doppstadt AK Series grinder?

INNOVATIVE FEATURES ON DOPPSTADT HIGH-SPEED GRINDERS

The aggressive, free-swinging hammers protect themselves from contaminants.

Intuitive, user-friendly control panel and dynamic remote control.

Total and easy access to the all the machine components and engine.

INNOVATIVE SOLUTIONS TO UNIQUE PROBLEMS

Finish to your spec.

Doppstadt AK Series grinders are highly efficient machines that are used for a variety of applications. These powerful machines process waste wood, green waste, organic matter, shingles, dry wall, or RDF and create finished products to your spec. With a portable range of wheeled and tracked units in three different sizes, there is a grinder for your operational footprint and your budget.

Quality engineering for quality work.

The AK machines use a load-sensing scraper floor and an aggressive feed roller that ensures material is optimally fed into the hammer mill. This means less downtime, better fuel consumption, and a more consistent finished product with a longer life on wear parts. Additionally, AK grinders feature a fail-safe in case of contaminants: a nitrogen accumulator will kick open the screen grate to stop catastrophic mill damage from contaminated feedstocks.

The upswing-flail hammer mill reaches 1140 RPM, and the carbide-tipped replaceable hammers can be changed out in minutes. Several hammer and screen configuration options are available depending on the application.

With Tier-5 engine technology and best-in-class fuel consumption, AK grinders are as efficient as they are reliable. Technicians have complete operational and diagnostic control through the intuitive control panel and the hand-held remote control, and telematic monitoring allows a factory technician access to the machine for remote support. Need to change screens? Those can be swapped out in 15 minutes.

The complete package for your application.

AK Series grinders are customizable for your application. Options include hopper extensions, various screen grate sizes (between 1 & 8-inch), a 60-inch lowerable rear discharge conveyor, a water spray system, a neodymium cross band magnet, a magnetic head pulley and chute, and a food-pedal expansion kit.

rack and grind simultaneously with the twospeed, heavy-duty tracked undercarriage.

Various screen sizes available, and all screens are easily changed in 15 minutes.

Load-sensing scraper floor and feed roller ensure maximum production and efficiency.
